Subject: Denka Chloroprene Turn Around
Denka Nov. Dec. 2017 Turnaround.pdf

Attached is the results of the air emissions that occurred during the first week of the Denka turnaround to install the Regenerative Thermal Oxidizer and other control technologies.

The highest ever levels of Chloroprene and Toluene occurred during the first week. In addition elevated levels of Chloroprene and Toluene also occurred during the first week of the turn around.

Community members in Reserve have been complaining about excessive air emissions and acute health impacts during the turn around.

I am extremely concerned about the excessive air emissions and resulting health impacts.

Wilma
